

Clean Set of Amended Claims

8. (Amended) A display apparatus for a notebook computer having a system body with a main printed circuit board, comprising:

a panel module including a display panel and a back light unit for irradiating to the display panel, said display panel having a pixel matrix that displays a picture information processed by the main printed circuit board, said panel module further including drivers mounted on the display panel that drive the pixel matrix;

a module control board having a timing control unit for driving the drivers and a back light unit driver for driving the back light unit of the panel module;

a first connecting device that connects the timing control unit and back light unit driver of the module control board with the drivers and the back light unit of the panel module, wherein said first connecting device includes a flexible printed circuit film; and

a second connecting device that connects the main printed circuit board with the module control board to provide signals from the main printed circuit board to the module control board.

9. (Amended) The display apparatus as claimed in claim 8, wherein said second connecting device includes:

a flexible printed circuit film being coupled between the drivers and the module control board; and

Serial No. 09/137,842

Docket No. YHK-007

Discontinued
a conductive line being connected between the module control board and the back light

unit.
